

User Interface

Excellent	10	Good	7	Average	4	Poor	0
Fully functional user interface created using JavaFX. All screens and events working correctly. Complete mapping to SSD/Expanded use case		Mostly functional user interface created using JavaFX. Most screens and events working correctly. Complete mapping to SSD/Expanded use case		Average User interface created using JavaFX. Few screens and events working correctly. Some mapping to SSD/Expanded use case		No user interface created	

Business Logic Layer Functionality

Excellent	15	Good	11	Average	7	Poor	3
Program is logically well designed, displays correct output, executes correctly with no syntax or runtime errors.		Program has slight logical errors that do not significantly affect the results, output has minor incorrect values		Program has significant logic errors, output has multiple incorrect values		Program logic is completely incorrect, output is incorrect, does not execute (major syntax errors)	

OOP principles in Business Logic

Excellent	15	Good	11	Average	7	Poor	3
-----------	----	------	----	---------	---	------	---

Database	Well encapsulated classes. Program takes full advantage of inheritance, abstraction and polymorphism where appropriate to effectively meet its responsibilities	Mostly well encapsulated classes, program takes some advantage of inheritance, abstraction and polymorphism where appropriate to effectively meet its responsibilities	Mostly well encapsulated classes, program takes little advantage of inheritance, abstraction and polymorphism where appropriate to effectively meet its responsibilities	Program does not demonstrate encapsulation, inheritance, abstraction or polymorphism
	Excellent	10 Good	7 Average	4 Poor
Architecture & Integration b/w UI, BL and DB	Tables named correctly. Exception Handling. Data properly read, written, updated and deleted in tables. Input validation for all values taken from the user.	Most Tables named correctly. Mostly Exception Handling done. Mostly Data properly read, written, updated and deleted in tables. Input validation for most values taken from the user.	Few tables named correctly. Few Exception Handling done. Few Data properly read or written or updated or deleted in tables. No Input validation done.	No DB Handling done
	Excellent	10 Good	7 Average	4 Poor
	All 3 layers (UI, BL & DB) implemented as separate packages/layers. All layers fully integrated and functioning correctly.	All 3 layers (UI, BL & DB) implemented as separate packages/layers. All layers mostly integrated and functioning correctly.	No clear separation between all 3 layers (UI, BL & DB), some integration done, some functioning correctly.	No clear separation between all 3 layers (UI, BL & DB). No integration between UI, BL and DB.

Use Cases

Consistency b/w design and code	Excellent	10	Good	7	Average	4	Poor	0
	All (4-5) use cases assigned to group member completed.		Most (2-3) use cases assigned to group member completed		Few (1-2) use cases assigned to group member completed		No use cases assigned to group member completed	
Design Patterns (GRASP & GoF)	Excellent	10	Good	7	Average	4	Poor	1
	100% mapping of design to code		70% mapping of design to code		40% mapping of design to code		>20% mapping of design to code	
Documentation	Excellent	10	Good	7	Average	4	Poor	0
	Controller, Information Expert, Creator, Low Coupling, High Cohesion and Protected Variation ALL applied correctly. GoF applied where applicable.		Controller, Information Expert, Creator, Low Coupling, High Cohesion and Protected Variation MOST applied correctly.		Controller, Information Expert, Creator, Low Coupling, High Cohesion and Protected Variation FEW applied correctly.		No design patterns applied	
	Excellent	10	Good	7	Average	4	Poor	0

Detailed documentation, following given template. All document sections complete with readable images of models.

Mostly detailed documentation, following given template. Most document sections complete with readable images of models.

Documentation done following given template. Some document sections complete with readable images of models.

No documentation done

Completeness				
	All use cases are done and implemented	Quality of use cases. Login and registration are not the main use cases	individual marking will be considered	running application
